Offset wire geometry

Designed with the perfect space tolerance between the whip and the bowl. Gains higher turbulence to optimize all the volume of the food in the bowl and prevent waste.

Each wire is attached to a solid center joint to achieve a stronger construction

The center axis

The bar as the fixed central inner core is attached to the solid center joint of the wires, makes the whip robust and staple of it's shape to achieve a better life span.

Thinner and robust wires

Designed to achieve lighter foam. The solid spring stainless steel wires make this whip the solid solution, which never gets out of shape. No more broken or twisted wires and deformed shaped whips to prevent an offset contact bowl and whip between and wear and tear.
